**FOR IMMEDIATE RELEASE**

## **J. Michael Kennedy Joins Federal Engineering Continuing the Expansion of its NG911/PSAP Practice**

**FAIRFAX, VIRGINIA**, January 3, 2017 — Federal Engineering, Inc. (**FE**) kicked off the new year by announcing that J. Michael Kennedy has joined the firm as Vice President of Sales continuing the expansion of **FE's** Next Generation 9-1-1 / Public Safety Answering Point (NG911/PSAP) practice.

Mr. Kennedy has been active in the public safety industry for nearly thirty years. His first 21 years was spent with Northrop Grumman and its predecessors. During that time, Mike began as a Subject Matter Expert for Records Management Systems, Computer Aided Dispatch Systems, Jail Management Systems, and Mobile Data applications. He ultimately moved into Business Development, first on the West Coast and later the East Coast. Associated with a number of large scale projects teams, Mike began working with third parties in developing system integration solutions based upon the CAD/RMS application set. His final position with Northrop Grumman was as the head of public safety marketing, a role that took him, among other responsibilities, across the globe capturing additional markets. For the last seven years, Mike has had roles as Western Regional Manager, Vice President of Business Development and finally General Manager for L.R. Kimball's Communications Technology Division.

Mr. Ronald F. Bosco, **FE's** President and CEO, stated: “We are thrilled to have Mike join our team focusing on our PSAP/NG911 marketing and sales efforts. As radio, data, and 9-1-1 services have become more integrated, Federal Engineering has grown to ensure jurisdictions can continue to obtain a broad range of consulting services from one firm. **FE/Kimball's** NG911/PSAP consulting practices have complemented and expanded **FE's** historical land mobile radio consulting. Our clients now benefit from decades of experience in 911, Computer Aided Dispatch (CAD), Records Management Systems (RMS), GIS, and wireless communications planning, design, and integration, as well as governance planning. As demand for these services continues to grow, **FE** continues to add capabilities so our clients can continue to rely upon our firm for all of its public safety system consulting needs.”

Federal Engineering is the leading, nationwide firm providing analysis, design, procurement, and implementation support for public safety and public service communications. **FE** provides consulting services involving LTE as well as traditional VHF, UHF, 700 MHz, 800 MHz, 900 MHz and 4.9GHz mobile radio systems. **FE** also supports FirstNet planning for the Nationwide Public Safety Broadband Network. Since 1983, **FE** has completed thousands of projects for 46 state governments, as well as numerous local and federal government clients.

In addition to its public sector work, Federal Engineering provides design and implementation support services for voice, data, and video networks used in the transportation, utilities, aerospace, finance, education, publishing, and computer services industries. **FE's** certified independence ensures that clients receive objective, unbiased consulting services that are not influenced by any particular technology, product, vendor, or approach.
